

# WHAT YOU CAN'T SEE CAN HURT YOU.

As it turns out, so can what you don't know.  
Test your knowledge of oral health below:

## True or False

1. Your oral health can impact your overall health and well-being.  
 True       False
2. Gum disease (periodontal disease) is a chronic infection that is most often caused by the build up of dental plaque.  
 True       False
3. Tobacco users are more likely than non-users to develop gum disease.  
 True       False
4. Women with gum disease are twice as likely to deliver a premature low-birth weight baby.  
 True       False
5. There is no link between oral health and heart and stroke disease.  
 True       False
6. Dental decay, a disease caused by bacterial infection, is one of the most common disorders of childhood affecting more than half of 5 to 17 year-olds.  
 True       False
7. Oral health has little impact on the quality of sleep of pre-schoolers.  
 True       False
8. Toothache is the most common pain affecting the daily lives of Canadians.  
 True       False
9. Poor oral health impacts the psychological and social well-being of one in 12 Canadians.  
 True       False
10. Nearly half of Canadians will be affected by gum disease at some point in their lives.  
 True       False
11. Good oral hygiene habits can help prevent gum disease.  
 True       False
12. Chronic bad breath can be a sign of gum disease.  
 True       False

1. True. Research shows there may be a link between oral disease and other health problems, and that the state of the oral and related tissues contributes to physical, mental and social well-being and to the enjoyment of life's possibilities. 2. True. While there are many factors involved in the development of gum disease, the most common cause is the build up of dental plaque. Plaque is a colourless film of bacteria that coats teeth and gets between the tooth surface and gum tissue. Over time, plaque hardens into tartar and causes the gums to become inflamed. If left untreated, the inflammation can develop into a serious infection that attacks the bone supporting the teeth and causes the gum tissue to shrink. 3. True. Tobacco users are 4 times more likely to develop gum disease than non-smokers. 4. False. Women with gum disease are up to 7 times more likely to deliver a premature low-birth weight baby. 5. False. Several research studies have found correlations between gum disease and heart and stroke disease. Your risk of cardiovascular disease increases with the severity of the gum disease. 6. True. Roughly 60 per cent of children 5 to 17 are affected by dental decay. 7. False. A rapid form of dental decay affects pre-schoolers and can cause pain, poor sleep and poor eating habits. 8. True. Canadian studies have found that in a four-week period, 6 to 9 per cent of adults experience moderate to severe oral or facial pain. 9. False. Poor oral health impacts the psychological and social well-being of one in 12 Canadians. It takes away from their enjoyment of eating and affects communication, social relationships and other daily activities. 10. False. Up to 80 per cent of Canadians will be affected by gum disease at some point in their lives. 11. True. Start by brushing and flossing your teeth every day. Eat a healthy balanced diet but limit your intake of sugar snacks. Most importantly, visit your dentist regularly for a thorough examination and cleaning. 12. True. Other potential signs of gum disease include: gums that bleed when brushing or flossing; teeth overly sensitive to hot or cold; bright, red, swollen or tender gums; and loose teeth.

# ONLY YOUR DENTIST KNOWS WHAT LIES BELOW.

Gum disease. Root cavities and infections. Oral cancer. Most people never see them coming. But these hidden threats to your oral health can lead to severe pain, loss of teeth, and serious health implications. Only your dentist has the training, skill, and expertise to spot and treat these dangers before it's too late. So see your dentist. Because what you can't see can hurt you.
